IN THE CLAIMS

- 1. (Currently Amended) A synthetic fuel composition, comprising:
- (a) at least about 90 wt. % of coal dust;
- (b) from about 0.5 to 8.0 wt. % based on the weight of the coal dust of one or more organic chemicals selected from the group consisting of functionalized starches, polysaccharide resins and mixtures of polysaccharide resins with copolymers of sodium acryaltes and acrylamide reactive with said coal dust, and
 - (c) water,

wherein the polysaccharide resins have a molecular weight less than 500,000.

- 2. (Cancelled)
- 3. (Original) A fuel composition according to Claim 1, wherein the coal dust is from anthracite coal.
 - 4. (Cancelled)
- 5. (Previously Presented) A fuel composition according to Claim 1, which is compacted.

Attorney Docket No.:080395.52533US

Serial No. 09/935,107

PATENT

6-8. (Cancelled)

9. (Previously Presented) The synthetic fuel composition according to Claim

1, wherein about 90% of the particle of the coal dust are 50 microns or less.

10. (Original) A synthetic fuel component comprising:

a) at least about 90 wt. % of coal dust;

b) about 0.5 to 8 wt. % based on the weight of the coal dust of one or more

functionalized starches polysaccharide resins having a molecular weight less than

500,000; and

c) water.

11. (Currently Amended) The They synthetic fuel composition according to

Claim 10, where the functionalized starch is one or more polysaccharide resins

consist consisting of a solution of a polysaccharide having a dextrose equipment

equivalent between 0.1 and 100 wherein the polysaccharide has been chemically

modified.

12. (Currently Amended) A method of making a synthetic fuel composition,

comprising:

3

Attorney Docket No.:080395.52533US

Serial No. 09/935,107

PATENT

mixing at least about 90 wt. % of caol dust with water and with one or more

organic chemicals selected from the group consisting of functionalized starches,

polysaccharide resins and mixtures of polysaccharide resins with copolymers of

sodium acrylates and acrylamide and mixtures thereof reactive with said coal dust

to forma composition; and

compacting the composition; thereby forming the synthetic fuel composition.

13. (Previously Presented) The method of Claim 12 wherein at least about

90 % of the particle sizes of the coal dust is 50 microns or less.

14. (Original) A method of making a synthetic fuel composition according to

Claim 12, wherein compaction is provided by a pug mill.
